General practitioners

Are you providing care for the elderly?
Working in an aged care facility?
Then this is relevant to you ...

The Course

Managing Care in the Elderly: A Training Program for GPs has been developed as one of a range of strategies to support general practitioners who provide care to the elderly and/or work in Aged Care Facilities.

The focus of the Program is on multidisciplinary, holistic care and a pro-active approach to maintaining the independence of elderly people in our community.

Course Content

A series of ten interactive modules are offered with the option of a clinical attachment in an interdisciplinary setting. Modules are presented in different formats –

- debate;
- case studies;
- lectures; and
- hypotheticals.

Module 1 Debate on Residential Care

- Role of the GP in coordinating care for the elderly
- Issues of community versus residential care

Module 2 Aged Care and Rehabilitation Assessment

- Role of the Aged Care and Rehabilitation Assessment Team
- Services and resources to which patients are referred after assessment

Module 3 Dementia

- Appropriate referral sources for patients with dementia
- Assessment, diagnosis, medication and management for patients with dementia

Module 4 Delirium

- Causes of delirium, signs and symptoms
- Skills in choice of appropriate investigations
- Management, medication and prevention

Module 5 Falls and Fractures

- Major causes of falls in the elderly.
- Identifying and assessing patients at risk of falls
- Function of falls clinics and community resources to assist elderly people at risk or post falls
- Managing common fractures in the elderly
- Diagnosis and management of osteoporosis

Module 6 Stroke and Cardiovascular Disease

- Causes and types of Cerebro Vascular Accidents (CVA) and Cardiovascular disease
- Services and resources available for assessment, treatment and rehabilitation
- Treatment and management of patients recovering from CVA, or an acute cardiovascular episode.

Module 7 Continence Management, Constipation/PEGs

- Prevention and treatment for bowel and bladder continence in the elderly
- Appropriate management of PEGs

Module 8 Polypharmacy

- When to instigate a medication review
- Use of preventative resources ie. Home Medication Reviews, Webster Packs or Dosette boxes
- Common interactions of drugs used frequently by elderly people

Module 9 Palliative Care

- Palliative care principles
- Pain management options and resources
- Psychosocial and communication issues

Module 10 Legal and Ethical Issues

- Current legal and ethical issues related to euthanasia in the elderly
- Problems of elderly abuse in its physical, psychological and financial forms
- Legal issues surrounding guardianship, advocacy and a living will

Continuing Professional Development (CPD) Points

The course is structured to obtain CPD points for each session. A minimum of 7 of the 10 modules must be completed in order to obtain a certificate. Each Module attracts 2 CPD points per hour. Clinical Attachments attract 20 Group 1 CPD points plus 2 points per hour to a maximum of 50 points or 25 hours.
